Exports ◆ April 2003

- The value of BC origin exports is up 9% in the first four months of 2003 compared to the same period last year. Prices for energy commodities continue to fuel the export growth. The value of natural gas exports has skyrocketed compared to the January to April period of 2002, increasing 209%. The value of electricity transmissions has jumped 113% year-to-date.

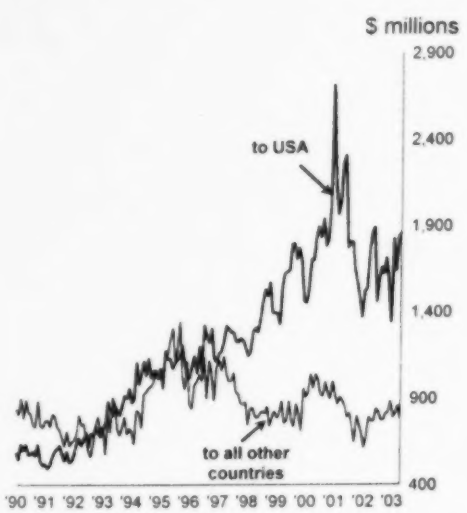
- The combined effects of the softwood lumber dispute, low prices and a rising Canadian dollar are seriously hurting softwood lumber exports. Year-to-date softwood lumber exports to the US are 36% lower compared to the first four months of 2002. In April, the implicit price of softwood lumber exported from BC (i.e., value divided by quantity) was at its lowest point since October 1992. Much of this is due to oversupply, which is a result of Canadian companies running near full capacity in an effort to bring down costs to mitigate against the duties payable to the United States.

- So far this year (to April), the value of mineral product exports has risen almost 14% compared to 2002. Unwrought aluminum shipments are up 16%, exports of copper ores and concentrates have jumped 30% and international sales of molybdenum ores and concentrates have increased 98%.

- Exports to the Pacific Rim have risen 20% year-to-date. Increases in Japan (+11%), Taiwan (+76%), South Korea (+27%) and China (+50%) have led the way. The value of exports to the European Union has fallen 3% year-to-date as shipments to the United Kingdom (-10%) and Germany (-18%) have dropped off.

- In May, the discovery of bovine spongiform encephalopathy (more commonly known as "mad cow disease") in a cow in Alberta prompted the United States to ban all imports of Canadian bovine and ruminant animal products. Total exports of live animals and meat products from BC fitting this description were approximately $122.4 million in 2002. This represents 0.5% of the value of all BC exports for the year.

High prices for energy products continue to drive growth in the value of BC origin exports

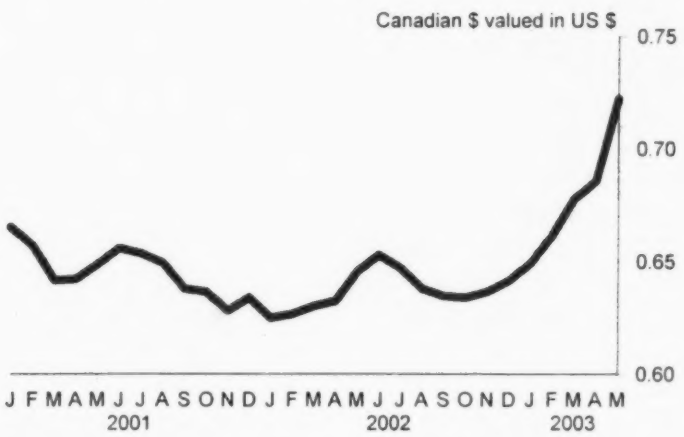


Exports and the Rising Dollar

The rapid appreciation of the Canadian dollar against its American counterpart has sparked concern for Canadian exporters. The rising dollar is a worry for exporters because: (a) where goods are priced in American dollars, it means the Canadian producers are receiving less for their goods when the revenue is converted to Canadian currency; and (b) where goods and services are priced in Canadian dollars, Canadian goods and services are more expensive to American buyers, so demand for goods and services from BC and the rest of Canada may fall, which could result in a significant decline in exports. Approximately 68% of BC origin goods exports and 87% of all Canadian commodity exports were shipped to the United States in 2002, which demonstrates the importance of that market.

In 2002, the US was the destination for 68% of BC's commodity exports and 87% of Canada's

The rapid appreciation of the Canadian dollar is causing concern for exporters



The rapid rise in the Canadian dollar from about 63 cents US in January to over 73 cents in just four months has exporters worried

While it is true that a higher-valued Canadian dollar will negatively affect the revenue of Canadian exporters, this does not necessarily mean that it will have a detrimental effect on their bottom line. Whether or not an exporter's net income is affected by the rising dollar depends on more than just its revenue stream. For example, it was recently reported that the sudden increase in the Canadian dollar has been a windfall for some BC forest companies.[1] The reason is that they have significant debt denominated in US dollars. This means that in the same way that American consumers have to pay more for Canadian products because it takes more American currency to buy Canadian dollars, these companies have to pay less in debt charges because it takes fewer Canadian dollars to buy American currency.

Those exporters with US-denominated debt may actually be benefiting from a higher Canadian dollar

[1] For example, see "Rising loonie helps debt but will hurt lumber," *Vancouver Sun*, May 8, 2003, p. F3.

Another possible benefit of the appreciating dollar is in terms of lowering the cost of production. In cases where manufacturing firms import significant amounts of the material inputs to their products, or machinery and equipment used in production, the cost savings from these inputs could at least partially offset the reduction in sales revenue.

Exporters with significant material inputs imported from the US may achieve cost of production savings that will at least partially offset reduced sales revenues

Unfortunately, in British Columbia, much of what is exported is based on resource materials extracted within the province or is in the form of services, such as tourism. For these exports there is very little, if any, input material that is imported from elsewhere. For these exporters, unless they hold US-denominated debt, the rising dollar is problematic.

The service sector is possibly the most susceptible to severe fluctuations in the dollar. One example of a service sector that has benefited from a low Canadian dollar is the film industry. The price advantage afforded American filmmakers due to the favourable exchange rate has resulted in Canadian locations, particularly in BC and Ontario, attracting major film projects that may have otherwise been filmed in the United States, or in the case of some smaller budget projects, not been filmed at all. The strong growth in these so-called "runaway" productions has raised the ire of many of those working in the American film industry that believe American jobs are being exported to Canada.[2] The rising dollar may threaten some of this production in Canada, although it will likely have to appreciate considerably further to cause significant harm to the Canadian industry, particularly since the currencies of

Other currencies are appreciating against the US dollar as well

The Canadian dollar is not the only currency appreciating against the US dollar

[2] For some background on this issue, see the article *'Is "Runaway" Film Production in Canada Harming the U.S. Industry?'* in the February 2002 issue of *Exports*.

countries such as Australia and New Zealand, which are among Canada's main competitors in the film sector, are also appreciating against the US dollar. Other benefits of filming in Canada, such as qualified film crews, tax incentives, unique locations, common language and proximity to American post-production facilities should maintain the Canadian film industry's viability regardless of fluctuations in the exchange rate.

Tourism is another service sector that could suffer poorer earnings as a result of the rising dollar. After the terrorist attacks of 9/11 revenues from many tourism-related industries, particularly air travel, took a significant hit. For Canadian tourist destinations, the low Canadian dollar, combined with the relative proximity to the United States, helped attract many of those US tourists that had become reluctant to travel long distances. Perhaps even more importantly, the exchange rate convinced many Canadians to stay at home and travel within their own country. As the Canadian dollar rises and the spectre of terrorism begins to fade in people's minds, Canada could lose some of its lústre as a tourist destination for both Americans and Canadians alike and this could hurt tourism revenues.

The tourism sector and other services could be hurt by a higher dollar

There is some statistical evidence to support the idea that trade in services is more closely tied to fluctuations in the exchange rate. Based on a simple statistical regression of British Columbia service exports in *constant dollars* (i.e., removing the effects of inflation and exchange rates) against the exchange rate and a simple time trend, the exchange rate was shown to be a significant determinant of volume of service exports. On the other hand, for trade in goods, for BC, the exchange rate was not a significant determinant of export volumes.[3]

Regression equations:

SE = 4904 – 5092 * ER+ 147 * T
GE= 5990 – 1587 * ER + 593 * T

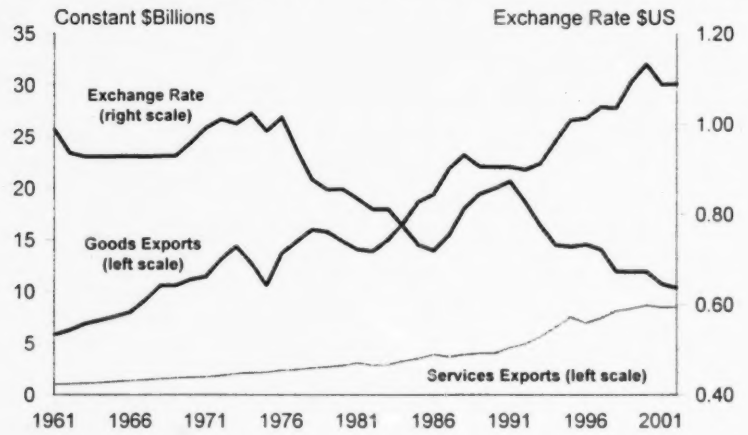
Where SE=Services Exports, GE=Goods Exports, ER=Exchange Rate, T=Time Trend
(See footnote for statistics)

This does not necessarily imply that the exchange rate has no effect on BC commodity export volumes. It could mean that the general growth trend in exports dwarfed any exchange rate effects, or that the significance for some goods is concealed in the aggregate. For commodities like natural gas and electricity, for example, the exchange rate is unlikely to effect demand. Sales of these energy products are limited more by supply than demand. On the other hand, sales of machinery and equipment, for which there are more likely to be substitutes within the United States, are much more susceptible to exchange rate effects.

[3] The regression using annual exports of services from BC from 1961 to 2002 had an adjusted R-squared of 90% and t-values of -2.4 for the exchange rate variable (in $US) and 7.4 for the time trend variable. For goods exports, the R-squared was 96%, with t-values of -0.4 for the exchange rate and 14.8 for the trend variable.

103-06459/

Exports of both goods and services have grown steadily over the last few decades, but it is likely that only a portion of that growth was due to the falling dollar



Note: Export data presented here is from the Provincial Economic Accounts

There has been strong growth in goods and services exports over the last 40 years, but the value of the Canadian dollar is likely responsible for only a small portion of that growth

In the case of most resource products, prices are in American dollars, which means the changing exchange rate should not influence demand, but could have an effect on whether or not the supplier can afford to sell at that price. For instance, if a Canadian company has higher production costs than an American competitor, a low-valued Canadian dollar could still allow it to sell at the market rate (assuming most of its costs, such as labour and capital inputs, are in Canadian dollars). However, if the dollar appreciates enough, at some point the higher production costs will not be cancelled out by the exchange rate difference and the Canadian company will find itself in a situation where it can no longer afford to compete with the more efficient competitor.

For most resource sectors, rising commodity prices will help offset the higher Canadian dollar, at least to some extent, but for lumber producers it is a different story. The rising dollar combined with the ongoing dispute with the United States is creating a double whammy for British Columbia's lumber producers, or perhaps even a triple whammy. The higher value for the Canadian dollar means Canadian exporters are already taking a hit, because with their goods priced in US dollars, they are getting less when it is converted to Canadian currency. On top of that they have to pay a 27% duty on shipments to the US. To make matters even worse, Canadian mills have been trying to operate at full capacity to reduce costs in order to continue running in the face of these substantial duties, but this has resulted in an oversupply of wood on the market. Consequently, prices for lumber have fallen and are not likely to rise unless the excess supply is used up.

The rising dollar is exacerbating problems caused by the softwood lumber dispute

While it is beyond the scope of this report to determine with any precision the effect that the exchange rate has had on exports of goods and services from BC, it is likely that the overall effect is reasonably small and transitory, although for some industries, the effect may be significant. Service-producing industries, like tourism, may be more prone to suffering from a higher valued dollar and some goods-producing industries may be more affected than others. However, there are other factors, such as commodity prices, tariffs, global economic conditions, and so on that are likely far more important in terms of their effect on BC exports and BC exporters.

There are some disadvantages to a low Canadian dollar for exporters

In fact, there may be some disadvantages to exporters to having a low Canadian dollar. For example, when the dollar is low it is more expensive to import new cutting-edge technologies. This, combined with an "exchange rate subsidy," in effect, may cause Canadian companies to become complacent, allowing productivity to decline and investment in new capital to lag. The higher Canadian dollar may push these companies to become more efficient and accelerate investment in new technologies.

A higher value for the Canadian dollar may not in itself be a threat to the viability of Canadian exporters, but rather, it is the rate of appreciation that is causing problems. The rapid rise is not giving Canadian companies the time to adjust. If the rise occurred at a slower pace, Canadian exporters could make the necessary capital improvements and still maintain profitability.

NOTES

Countries Included Within World Regions:

(1) Western Europe: United Kingdom, Ireland, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland.

(2) Eastern Europe: other Europe, including all of Russia, Georgia, Kazakhstan, Kyrgyzstan, Moldova, etc.

(3) South East Asia: Malaysia, Brunei Darussalam, Singapore, Myanmar, Kampuchea, Laos, Indonesia, Philippines, Thailand, Vietnam.

(4) Africa: continental Africa, excluding Ethiopia, Libya, Somalia, Sudan, Egypt.

(5) South America: continental South America from Colombia and Venezuela south to Chile and Argentina, including offshore islands, but not Caribbean.

(6) Central America and Caribbean: from Guatemala and Belize to Panama, plus Caribbean Islands.

(7) Pacific Rim (including Japan): Japan, Hong Kong, Malaysia, Brunei Darussalam, Singapore, Laos, Mongolia, China, Indonesia, North Korea, South Korea, Philippines, Macau, Taiwan, Thailand, Vietnam, Australia, Fiji, New Zealand.

(8) Pacific Rim: as above, but excluding Japan.

(9) Middle East: from Turkey and Iran south through the Arabian Peninsula. Excluding Afghanistan and Pakistan, but including Cyprus, Ethiopia, Egypt, Somalia, Sudan and Libya.

'Selected Value-added Wood Products' category includes prefabricated houses, doors, windows, furniture, moulding, siding, etc. It does not include panel products, shakes, shingles or any pulp and paper products.

Revisions

Statistics Canada revises trade data for the previous three data years with release of the December data. The revision number is indicated in the footer of the tables (e.g., Rev 1 is the first annual revision, etc., and Prelim indicates it is the first release of data to December for that year). In addition to annual revisions, Statistics Canada revises the data for the previous data year every quarter (indicated in the footer by Rev Q1, etc).

Service Offered for Detailed Trade Statistics

For B.C. government statistics users requiring more detailed information on exports or imports, a special report service is offered through the address below:

Dan Schrier - Trade Statistics
BC STATS
P.O. Box 9410 Stn Prov Govt
Victoria, B.C.
V8W 9V1
(250) 387-0376

This service is provided through the Trade Research and Inquiry Package (TRIP) computer reporting system. TRIP offers user-defined tabulations of export or import statistics for British Columbia, Canada, the United States and other countries. Tabulations can include information on commodities, countries, U.S. states, years, months, mode of transport, etc.

Issue: 03-05

Exports ◆ May 2003

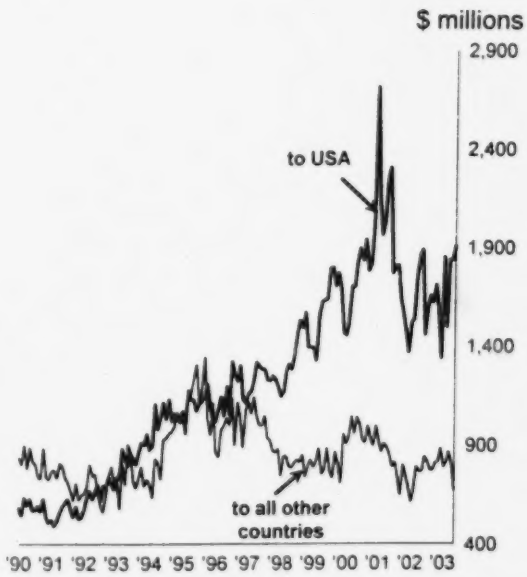
- The value of BC origin exports is up 6% year-to-date compared to the first five months of last year. The phenomenal inflation in the energy sector continues to fuel the export growth. The value of BC origin natural gas exports is over three times what it was in the January to May period of 2002 and the value of electricity transmissions has more than doubled. The only soft area in energy is in exports of coal, which are down 11% year-to-date.

- Performance in the forest sector is mixed as exports of solid lumber products are 22% off the pace of the first five months of 2002, but pulp and paper shipments have increased over 2%. Rapid appreciation of the Canadian dollar combined with the effects of the softwood lumber dispute and low lumber prices due to oversupply have seriously hurt lumber exports. Conversely, higher prices for pulp have helped boost the value of pulp exports almost 7%. However, low prices for newsprint have tempered growth for pulp and paper exports overall. The implicit price for newsprint (i.e., the value divided by quantity) is at its lowest point in almost nine years, which is why the value of exports of newsprint from January to May is down almost 13% from the same period a year ago.

- The closure of the Western Star Trucks assembly plant last fall continues to affect year-over-year comparisons of machinery and equipment exports. Exports of these products have fallen 9% year-to-date. More specifically, exports of motor vehicles and parts have dropped 43%.

- Exports in May were 3% lower than May 2002, due mostly to a significant drop in the value of exports to Japan (-26%). However, year-to-date, exports to Japan are still almost 3% higher than in the same period last year. Exports to other Pacific Rim countries are up 27% year-to-date. The improvement in value of exports to Asian destinations has been partially offset by a 3% drop in exports to the European Union.

Exports to the USA are up over last year mainly on the strength of high prices for energy products



Value Added Wood Production in BC Lagging Rest of Canada

There is no universally accepted definition of value added wood products, but the term is usually applied to products made from lumber such as mouldings, siding, engineered wood and completed articles constructed primarily from wood. Engineered wood products include glued laminated timber (or glulam) and laminated veneer lumber. Articles made from wood could include doors, windows, prefabricated houses and furniture. The definition of value added wood used here is constructed by BC Stats and is consistent with the data published in the tables of the Exports *release (as "selected value added wood products"). Included are most wood products that might be considered value added. Excluded from the definition are shakes and shingles, and panel products such as plywood, oriented strand board and medium density fibreboard.*

Although BC origin exports of value added wood products have increased significantly in the last decade, compared to the rest of the country, BC is falling behind. This is reflected in the province's share of total Canadian value added wood exports, which has been halved over the last ten years. In 1990, BC was the source of almost 33% of all Canadian exports of value added wood, ranking first in the country, but by 2002, this proportion dropped to 14% and BC slipped to third behind Ontario (35%) and Quebec (34%) as an exporter of value added wood products.

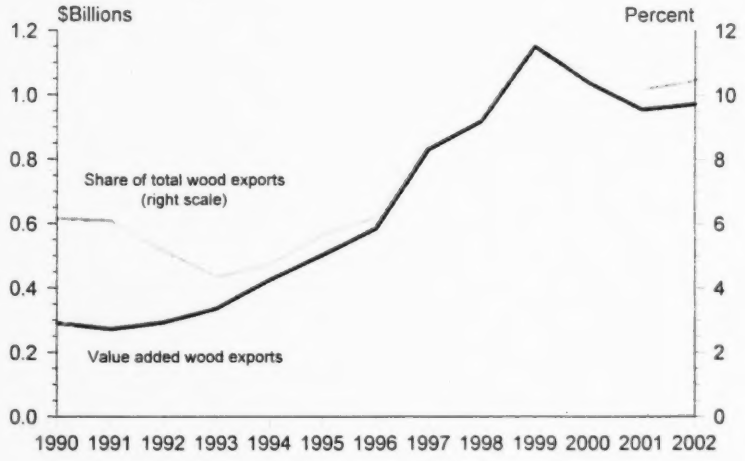
BC's growth in value added wood exports has been strong, but not nearly as strong as in the rest of the country

BC's share of Canada's value added wood exports has been in a steady state of decline over the last decade

BC's share of Canada's total value added wood exports has fallen from 33% in 1990 to 14% in 2002

The drop in share is not due to falling shipments of value added wood from British Columbia; rather, the value of these exports more than tripled from 1990 to 2002. Not only did value added wood exports increase dramatically in that period, but so too did their share of total wood exports. In BC, this share jumped from 6.2% in 1990 to 10.5% in 2002.

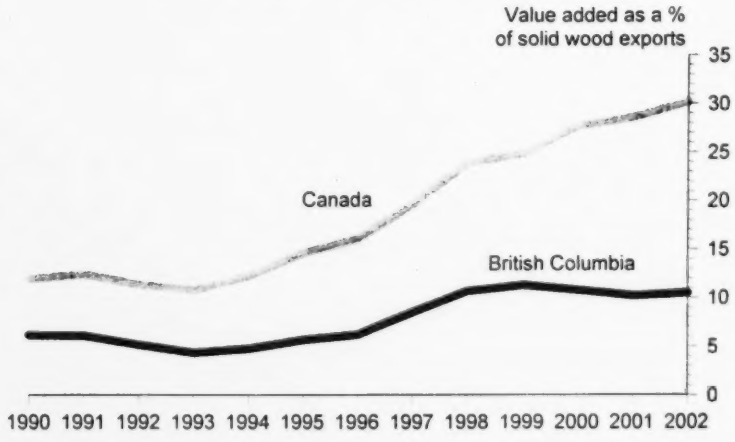
BC origin value added wood exports



BC's value added wood shipments have grown both in value and as a proportion of total wood exports

While the share of BC wood exports that is comprised of value added wood has increased markedly in the last decade, it is still quite small relative to other provinces. In fact, with the exception of Newfoundland and Labrador, BC had the smallest ratio of value added wood to total wood exports of any province in the country in 2002. By comparison, almost three-quarters of all wood exports from Manitoba (74%), over half of Ontario's wood shipments (52%) and 44% of Quebec's exported wood products were value added. The Canadian average was about 30%.

British Columbia lags well behind the rest of the country in terms of the proportion of wood exports that are value added

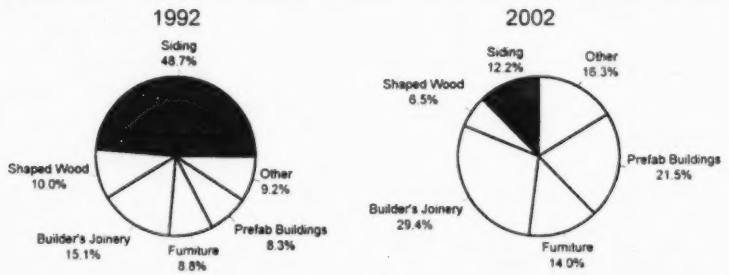


BC has a far smaller ratio of value added wood to total wood exports compared to the rest of the country

Over the last decade, the types of value added wood products shipped from British Columbia have changed substantially. In 1992, almost half of all value added wood exported was in the form of siding. By 2002, siding represented only 12% of value added wood exports. Most of the siding produced in BC is of the softwood variety, particularly western red cedar. Limited supply and competition from similar products made of cement, vinyl and metal has kept this industry from expanding. While the siding industry has remained fairly static, production of other value added wood products has increased significantly, resulting in a reduced share for siding. In addition, in the last couple of years, the siding industry has been severely affected by the softwood lumber dispute because softwood siding exported to the United States is subject to duties. Western cedar is a high-priced item and therefore pays a high premium when the 27% duty is applied. This, combined with competition from non-wood products, has resulted in a significant drop in BC siding exports.

BC's siding industry has been hit hard by the softwood lumber dispute

The distribution of British Columbia value added wood exports changed dramatically between 1992 and 2002



The BC value added wood product mix has changed significantly over the last decade

Meanwhile, exports of builder's joinery and carpentry of wood have experienced substantial growth. These are products like doors, windows, panels and other structural components of buildings. These products represented 15% of value added wood exports in 1992, but grew to a peak of 48% in 1999 before slipping to 29% in 2002. At the peak in 1999, exports of builder's joinery and carpentry of wood were valued at $549 million, up from $44 million in 1992. However, since that time, the value of exports of these goods has dropped to $286 million. Part of the reason for this may be increased competition from other provinces, particularly Quebec and Ontario. In 1992, Quebec exported only $15 million worth of these goods and Ontario shipped $39 million. By 2002, these numbers increased to $554 million for Quebec and $442 million for Ontario. Since these goods can be produced from a variety of tree species, including engineered wood made of chips and other wood by-products glued together, BC's abundance of larger, old growth trees is less of an advantage with respect to these products.

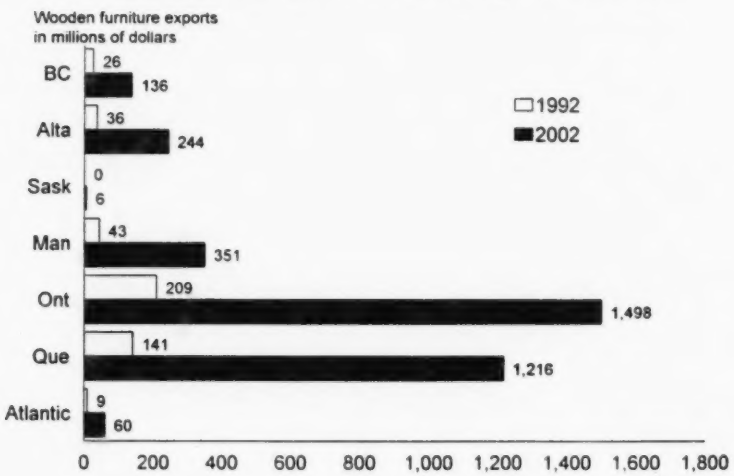
BC exports of builder's joinery and carpentry of wood expanded rapidly in the nineties, but has since dropped off somewhat

Taking up the slack left by the decline in builder's joinery exports was exports of prefabricated buildings. This product increased its share of value added wood exports from 8% in 1992 to 22% in 2002. Although these products usually have some non-wood components, they are mainly constructed of wood and are therefore considered a value added wood product.

BC exports of prefabricated buildings have more than doubled in the last decade

Furniture is another significant value added wood export from BC. In 2002, wood furniture surpassed siding in terms of value of exports. Furniture shipments have increased significantly in the last decade, rising from $26 million in 1992 (9% of value added wood exports) to $136 million in 2002 (14%). However, growth in BC has been overshadowed by the phenomenal increase in other provinces, particularly Ontario and Quebec, but also Manitoba and Alberta. For each of these provinces, furniture shipments represent well over half of all value added wood exports in 2002. With most wood furniture manufactured out of hardwood species and the majority of BC lumber being of the softwood variety, perhaps it should come as no surprise that BC is not a more significant producer of wood furniture.

The explosion of furniture exports from Ontario, Quebec, Manitoba and Alberta has overshadowed growth in BC



BC's exports of wooden furniture have increased significantly over the last decade, but nowhere near as much as in other provinces

Although British Columbia has significantly increased its exports of value added wood products over the last decade, it has not kept pace with other provinces. With the continued friction with the United States regarding shipments of softwood lumber, expansion of value added products may be one way to help the forest industry diversify and reduce its dependence on lumber exports.

NOTES

Countries Included Within World Regions:

(1) Western Europe: United Kingdom, Ireland, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland.

(2) Eastern Europe: other Europe, including all of Russia, Georgia, Kazakhstan, Kyrgyzstan, Moldova, etc.

(3) South East Asia: Malaysia, Brunei Darussalam, Singapore, Myanmar, Kampuchea, Laos, Indonesia, Philippines, Thailand, Vietnam.

(4) Africa: continental Africa, excluding Ethiopia, Libya, Somalia, Sudan, Egypt.

(5) South America: continental South America from Colombia and Venezuela south to Chile and Argentina, including offshore islands, but not Caribbean.

(6) Central America and Caribbean: from Guatemala and Belize to Panama, plus Caribbean Islands.

(7) Pacific Rim (including Japan): Japan, Hong Kong, Malaysia, Brunei Darussalam, Singapore, Laos, Mongolia, China, Indonesia, North Korea, South Korea, Philippines, Macau, Taiwan, Thailand, Vietnam, Australia, Fiji, New Zealand.

(8) Pacific Rim: as above, but excluding Japan.

(9) Middle East: from Turkey and Iran south through the Arabian Peninsula. Excluding Afghanistan and Pakistan, but including Cyprus, Ethiopia, Egypt, Somalia, Sudan and Libya.

'Selected Value-added Wood Products' category includes prefabricated houses, doors, windows, furniture, moulding, siding, etc. It does not include panel products, shakes, shingles or any pulp and paper products.

Revisions

Statistics Canada revises trade data for the previous three data years with release of the December data. The revision number is indicated in the footer of the tables (e.g., Rev 1 is the first annual revision, etc., and Prelim indicates it is the first release of data to December for that year). In addition to annual revisions, Statistics Canada revises the data for the previous data year every quarter (indicated in the footer by Rev Q1, etc).

Service Offered for Detailed Trade Statistics

For B.C. government statistics users requiring more detailed information on exports or imports, a special report service is offered through the address below:

Dan Schrier - Trade Statistics
BC STATS
P.O. Box 9410 Stn Prov Govt
Victoria, B.C.
V8W 9V1
(250) 387-0376

This service is provided through the Trade Research and Inquiry Package (TRIP) computer reporting system. TRIP offers user-defined tabulations of export or import statistics for British Columbia, Canada, the United States and other countries. Tabulations can include information on commodities, countries, U.S. states, years, months, mode of transport, etc.

Exports ◆ June 2003

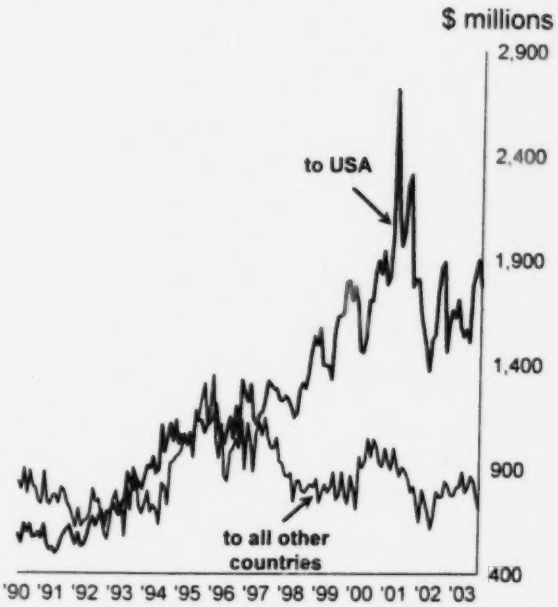
- Over the first half of 2003, the value of BC origin exports increased 5% over that of the first six months of 2002. As has been the case all year, high prices in the energy sector are driving the growth. The value of BC origin natural gas exports is up 171% from the first half of 2002, while the value of electricity transmissions is almost double.

- The combination of a higher valued Canadian dollar and the softwood lumber dispute continues to affect the value of lumber exports. So far, year-to-date, exports of softwood lumber to the United States are down 34% compared to the first six months of 2002. Elsewhere in the forest sector, the value of pulp exports was virtually unchanged from the January to June period last year, while newsprint exports fell almost 12%. The falling value of newsprint exports is due to declining prices for the commodity. The implicit price of newsprint exports (i.e., the value divided by the quantity) is at its lowest point since October 1994; however, quantities of newsprint shipped are up 9% year-to-date.

- Machinery and equipment exports are 8% lower than in the first half of 2002. The closure of the Western Star Trucks assembly plant last fall is the main reason for the decline as reflected in exports of motor vehicles and parts, which have dropped 44%.

- The value of exports to most of British Columbia's major markets increased over the first half of the year compared to the same period a year earlier. Energy exports helped boost the overall value of exports to the United States (+3%) and shipments to Japan (+4%) were also up. Shipments to the rest of the Pacific Rim (excluding Japan) jumped 16% due to strong growth in exports to China (+16%), South Korea (+13%) and Taiwan (+59%). The value of exports to the European Union edged up marginally (+0.4%) over the first half of the year despite a 14% drop in shipments to the United Kingdom.

Exports to the USA stay strong due to high prices for energy products



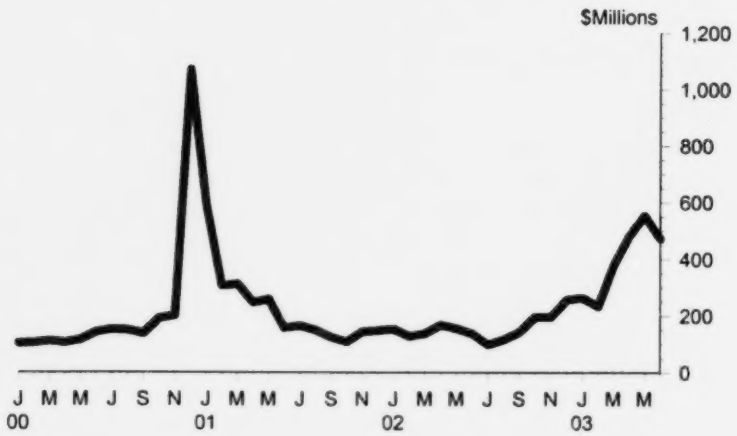
Natural Gas Heats Up British Columbia's Exports

Soaring natural gas exports are the main reason for growth in exports so far in 2003

High demand combined with a tight supply has sent the price of natural gas soaring, which is good news for British Columbia's natural gas producers. Corresponding to the price jump, the value of natural gas exports from BC has rocketed up as well, such that in the first half of 2003, the value of international shipments of natural gas was more than two and a half times that of the same period in 2002. While this most recent price inflation has a way to go before reaching the peak set in late 2000—early 2001, it appears that the higher prices may be sustained for a much longer period of time.

When natural gas prices shot up two years ago, it was mainly in response to the California energy crisis. This time around the circumstances are much different. This last winter in North America was much colder than usual, which resulted in greater than normal depletion of stored natural gas. As a result, storage levels are lower than normal and it is taking much longer than usual for them to recover to preferred levels. In addition to this short-term challenge, there is also a growing long-term problem with supply. Demand has been expanding much faster than supply and there are indications that this may continue over the longer term. If this happens, higher prices may prevail for several years until pipelines connecting new sources in the Northwest Territories and Alaska to the rest of Canada and the United States come on-line.

The value of exports of natural gas from BC is climbing once again



Although well below the peak set in December 2000, high values of natural gas exports are being sustained for a much longer period this time around

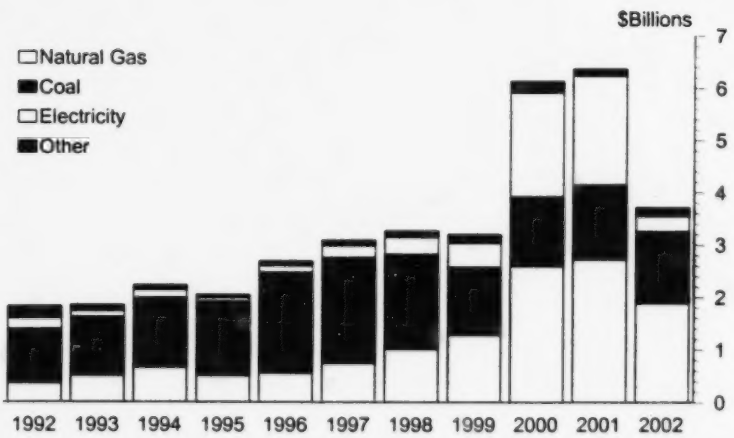
In British Columbia, virtually all natural gas production occurs in the northeast region of the province. According to the BC Ministry of Energy and Mines, 2002 was a record year for natural gas production in this province and growth is expected to continue. Of

total natural gas production in BC in 2002 (including field losses), about 64% was exported to the United States.[1] Natural gas exports have grown to such an extent recently that in the first half of 2003 the value of these international shipments from BC has rivalled that of softwood lumber exports, amounting to about 90% of the value of BC's largest export. If prices remain high throughout the year and the softwood lumber dispute continues to dampen the value of lumber exports, it is conceivable that natural gas will surpass softwood lumber as BC's most significant export in 2003. In terms of provincial government revenues from natural resources, natural gas together with oil revenues exceeded revenues from the forest sector for the first time in fiscal year 2000/01 and repeated that distinction in 2001/02.[2] The provincial government forecasts that in 2003/04, the revenue from natural gas alone will exceed that of the forest sector.

Year-to-date, the value of natural gas exports from BC has been about 90% that of international shipments of BC-produced softwood lumber

It is clear from these numbers that natural gas has evolved into an important export product for British Columbia. So far in 2003, the strong growth in the value of exports of natural gas has been responsible for most of the increase in total BC origin exports, more than compensating for the decline in solid wood exports. Over the last decade, natural gas has increased its share of total BC energy exports from 20% in 1992 to 51% in 2002. Electricity exports also experienced substantial growth in both value and share in 2000 and 2001, but more recently, low snow packs have reduced supply leaving very little excess power available for export.

Natural gas has grown to become BC's most important energy export



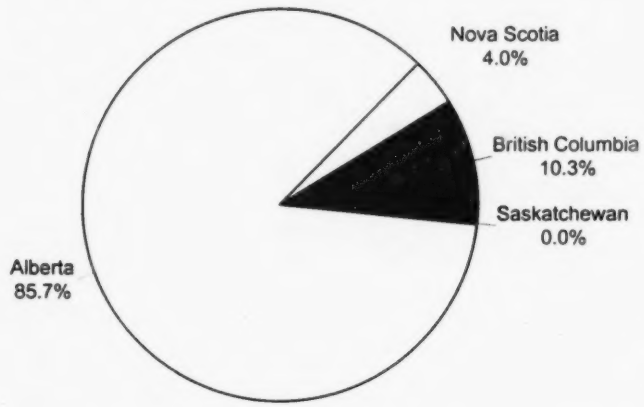
Natural gas comprised over half of BC's energy exports in 2002

[1] Source: BC Ministry of Energy and Mines, *Drilling and Production Statistics 1992-2002 (calendar years)*. The percentage is calculated by taking 20.8 billion m^3 in gas exported and dividing by total BC gas production of 32.4 billion m^3 (imports are excluded from the equation).

[2] Source: Government of British Columbia, *Budget 2003*, Table A8.

Despite the fact that production of natural gas in British Columbia has increased by about 85% in the last decade,[3] BC origin exports of the commodity are still only a fraction of the value of natural gas exports from Alberta. In 2002, BC was the source of just over 10% of Canada's total natural gas exports, while Alberta was the origin of approximately 86%. Nova Scotia (4%) and Saskatchewan (0.01%) were the only other provinces to export natural gas. This compares to 1992, when Alberta was the source of 92% of Canada's natural gas exports and BC shipped the remainder.

The value of British Columbia's natural gas exports in 2002 is still dwarfed by exports from Alberta



BC's natural gas exports are still only a fraction of the value of Alberta's

While British Columbia will probably never become Canada's premier source of natural gas, it has certainly evolved into a significant supplier. As long as demand remains high, natural gas should continue to be a lucrative commodity for British Columbia. Prices of natural gas will probably remain inflated for some time until new pipelines are built, which implies that natural gas will be one of the most significant exports for BC for years to come.

NOTES

Countries Included Within World Regions:

(1) Western Europe: United Kingdom, Ireland, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland.

(2) Eastern Europe: other Europe, including all of Russia, Georgia, Kazakhstan, Kyrgyzstan, Moldova, etc.

(3) South East Asia: Malaysia, Brunei Darussalam, Singapore, Myanmar, Kampuchea, Laos, Indonesia, Philippines, Thailand, Vietnam.

(4) Africa: continental Africa, excluding Ethiopia, Libya, Somalia, Sudan, Egypt.

(5) South America: continental South America from Colombia and Venezuela south to Chile and Argentina, including offshore islands, but not Caribbean.

(6) Central America and Caribbean: from Guatemala and Belize to Panama, plus Caribbean Islands.

(7) Pacific Rim (including Japan): Japan, Hong Kong, Malaysia, Brunei Darussalam, Singapore, Laos, Mongolia, China, Indonesia, North Korea, South Korea, Philippines, Macau, Taiwan, Thailand, Vietnam, Australia, Fiji, New Zealand.

(8) Pacific Rim: as above, but excluding Japan.

(9) Middle East: from Turkey and Iran south through the Arabian Peninsula. Excluding Afghanistan and Pakistan, but including Cyprus, Ethiopia, Egypt, Somalia, Sudan and Libya.

'Selected Value-added Wood Products' category includes prefabricated houses, doors, windows, furniture, moulding, siding, etc. It does not include panel products, shakes, shingles or any pulp and paper products.

Revisions

Statistics Canada revises trade data for the previous three data years with release of the December data. The revision number is indicated in the footer of the tables (e.g., Rev 1 is the first annual revision, etc., and Prelim indicates it is the first release of data to December for that year). In addition to annual revisions, Statistics Canada revises the data for the previous data year every quarter (indicated in the footer by Rev Q1, etc).

Service Offered for Detailed Trade Statistics

For B.C. government statistics users requiring more detailed information on exports or imports, a special report service is offered through the address below:

Dan Schrier - Trade Statistics
BC STATS
P.O. Box 9410 Stn Prov Govt
Victoria, B.C.
V8W 9V1
(250) 387-0376

This service is provided through the Trade Research and Inquiry Package (TRIP) computer reporting system. TRIP offers user-defined tabulations of export or import statistics for British Columbia, Canada, the United States and other countries. Tabulations can include information on commodities, countries, U.S. states, years, months, mode of transport, etc.

Exports (BC Origin) 1993-2002

NOTES

Statistics contained in this report may be revised in future releases.

'Selected Value-added Wood Products' category includes prefabricated houses, doors, windows, furniture, moulding, siding, etc. It does not include panel products, shakes, shingles or any pulp and paper products.

Produced by: BC STATS
Source: Statistics Canada

Countries Included Within World Regions:

(1) Western Europe: United Kingdom, Ireland, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland.

(2) Eastern Europe: other Europe, including all of Russia, Georgia, Kazakhstan, Kyrgyzstan, Moldova, etc.

(3) South East Asia: Malaysia, Brunei Darussalam, Singapore, Myanmar, Kampuchea, Laos, Indonesia, Philippines, Thailand, Vietnam.

(4) Africa: continental Africa, excluding Ethiopia, Libya, Somalia, Sudan, Egypt.

(5) South America: continental South America from Colombia and Venezuela south to Chile and Argentina, including offshore islands, but not Caribbean.

(6) Central America and Caribbean: from Guatemala and Belize to Panama, plus Caribbean Islands.

(7) Pacific Rim (including Japan): Japan, Hong Kong, Malaysia, Brunei Darussalam, Singapore, Laos, Mongolia, China, Indonesia, North Korea, South Korea, Philippines, Macau, Taiwan, Thailand, Vietnam, Australia, Fiji, New Zealand.

(8) Pacific Rim: as above, but excluding Japan.

(9) Middle East: from Turkey and Iran south through the Arabian Peninsula. Excluding Afghanistan and Pakistan, but including Cyprus, Ethiopia, Egypt, Somalia, Sudan and Libya.

Revisions:

Statistics Canada revises trade data for the previous three data years with release of the December data. The revision number is indicated in the footer of the tables (e.g., Rev 1 is the first annual revision, etc., and Prelim indicates it is the first release of data to December for that year). In addition to annual revisions, Statistics Canada revises the data for the previous data year every quarter (indicated in the footer by Rev Q1, etc).

August, 2003

Exports by Province 1993-2002

Statistics contained in this report may be revised in future releases.

Revisions:

Statistics Canada revises trade data for the previous three data years with release of the December data. The revision number is indicated in the footer of the tables (e.g., Rev 1 is the first annual revision, etc., and Prelim indicates it is the first release of data to December for that year). In addition to annual revisions, Statistics Canada revises the data for the previous data year every quarter (indicated in the footer by Rev Q1, etc).
